Disclaimer

All third-party product, company names, logos and their products and services are trademarks™ or registered® trademarks and remain the property of their respective holders. Use of them does not imply any affiliation with or endorsement by them.
Such use in this document is with the sole purpose of reference. "vIGNAN IoT" do not claim to be directly or indirectly to be its owner or having any endorsement of any kind or related in any perspective.

Third-party products and services management is purely made available by developing an interface to the "free for use" and/or alternatively termed as "open source" APIs provided by these third-party companies. vIGNAN IoT does not claim or hint to own or be responsible for any and all such APIs, products and services.
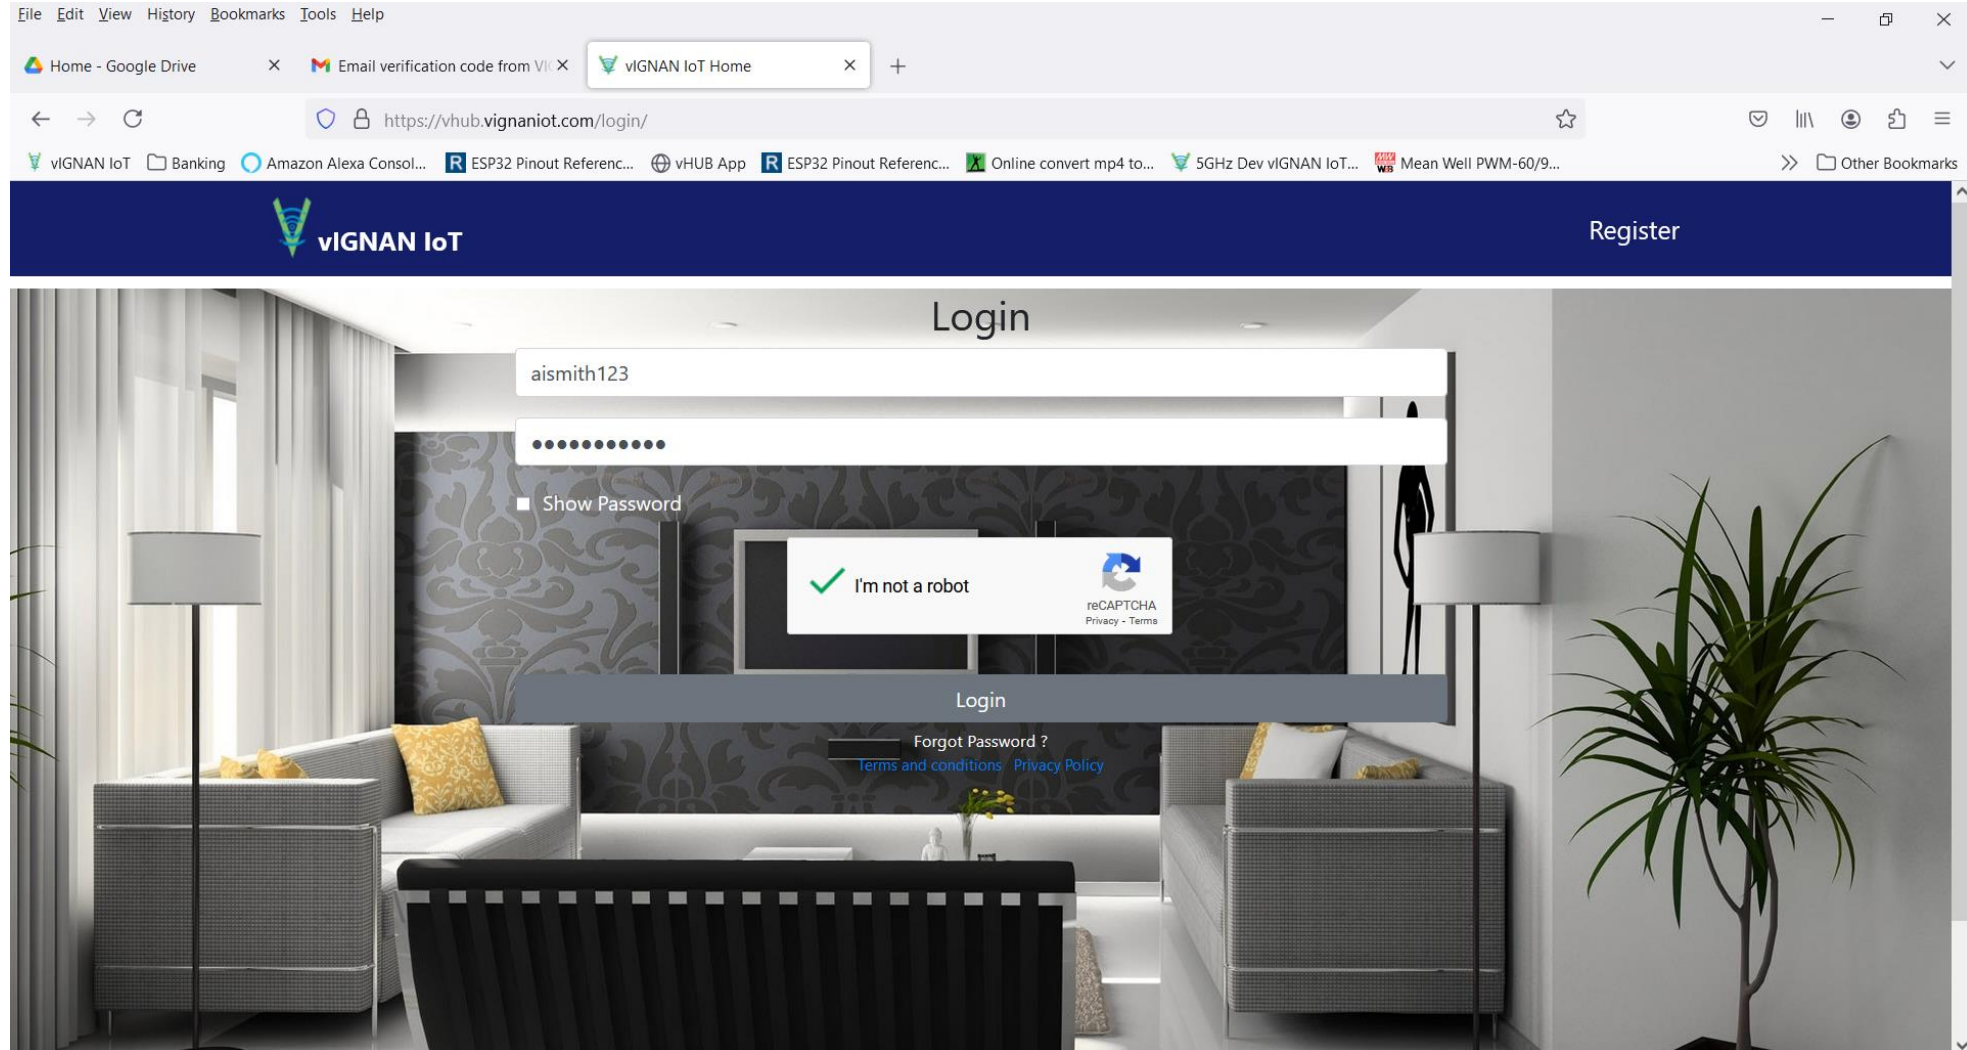

vIGNAN IoT good intent is to provide "ease of use" of multiple IoT devices.
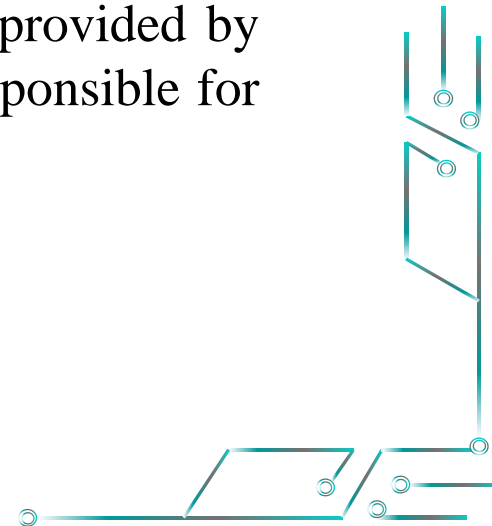

Step-1 Login to vHUB App

1. Open Internet Browser and go to URL https://vhub.vignaniot.com/login/

2. Type in your login credentials, check mark the box "I am not robot" and click on "Login" button
   Note: *Username is case sensitive*

Step-2 Create Home

1. Create a "Home" name. Some of the best practice examples are to use city name if you plan to manage multiple homes or properties at multiple geographical locations.
   Note: *Use only alphabets and maximum 11 characters are allowed*
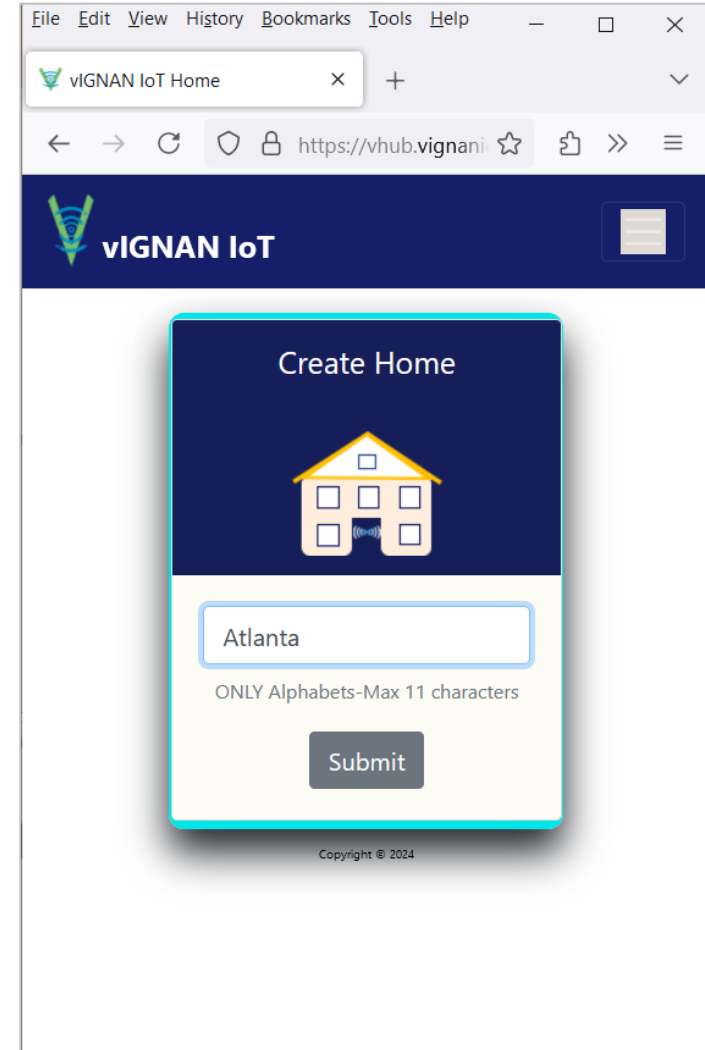

*In the example we create a home with city name "Atlanta"*

Step-3 Create Room

1. You successfully created "Home". Next, click on the "Home" icon. In our example, click on the home icon named "Atlanta" to add room in this home.

Click on the "Atlanta" home icon

Click on "Add Room"
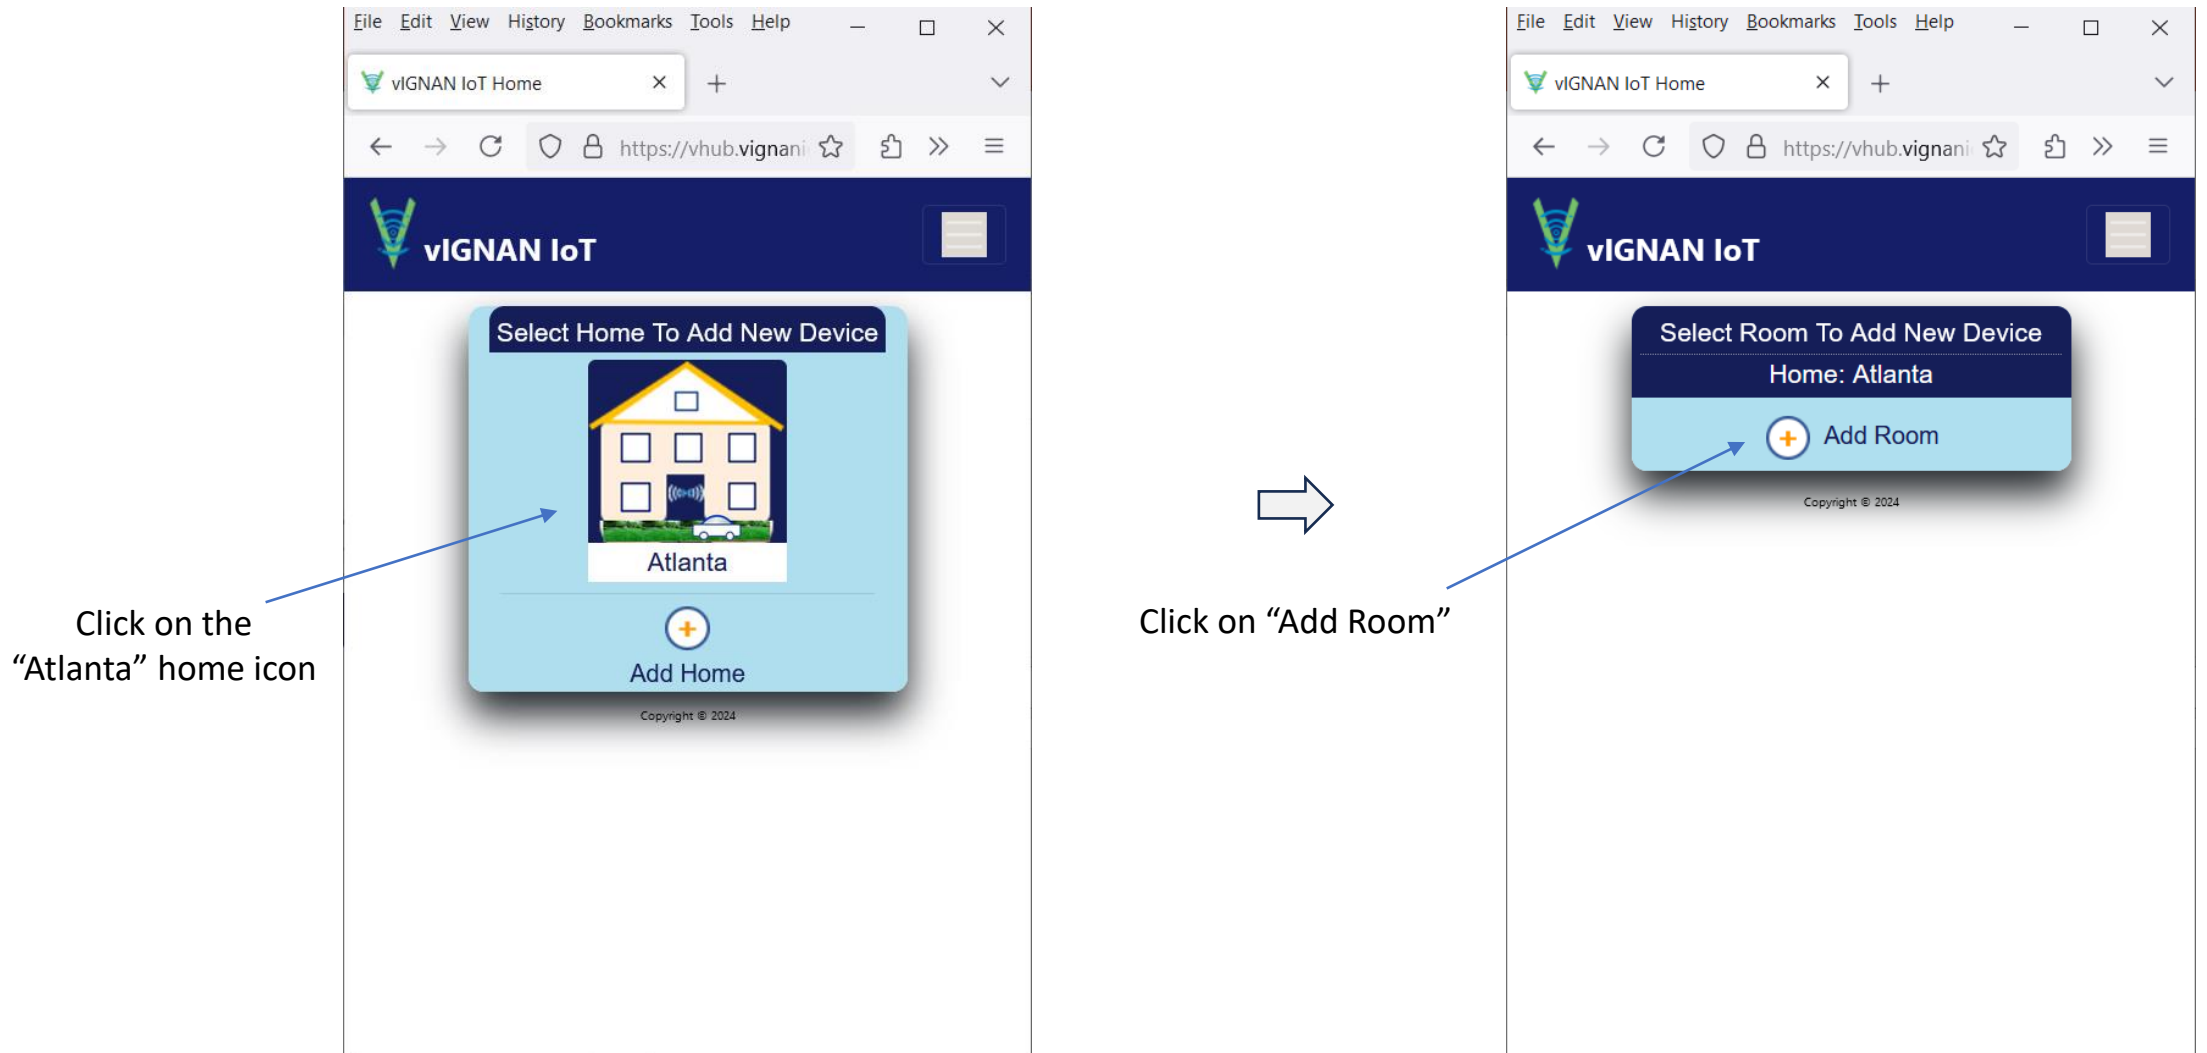

Step-3 Create Room *(continued...)*

2. Create a "Room" name.
   Note: *Only alphabets are allowed – minimum 2 and maximum 14 characters*
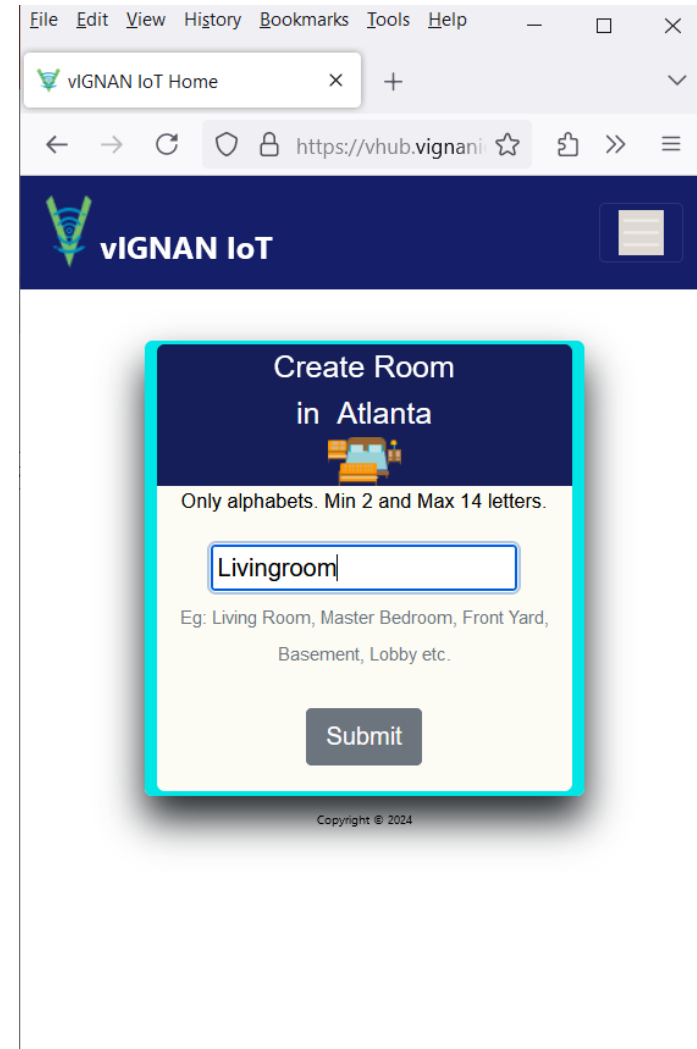

In the example we create a room with a name "Livingroom"
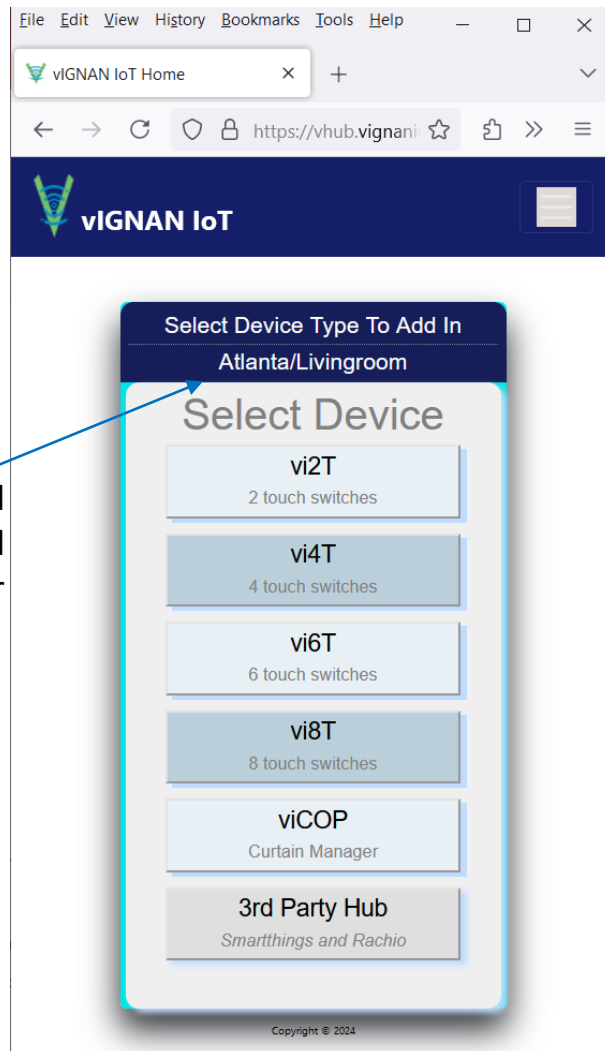

Step-4 Add Smart Device

1. You successfully created home "Atlanta" and room "Livingroom". Both these names are displayed in the header of the "Select Device" screen below.
2. Check the type of vIGNAN IoT Smart device you have and accordingly select the button.

Both home and room are listed in the header

vi2T — 2 touch switches smart device
- *Manages 2 x 110/220V devices*

vi4T — 4 touch switches smart device
- *Manages 4 x 110/220V devices*

vi6T — 6 touch switches smart device
- *Manages 6 x 110/220V devices*

vi8T — 8 touch switches smart device
- *Manages 8 x 110/220V devices*

viCOP — Curtain Operations Management device

** — 3rd Party Hub
Supports operations of smart hubs and devices discovered by these hubs (Support available for "Smartthings Hub" and "RACHIO" irrigation controller)

Step-4 Add Smart Device (continued...)

3. In the example below, we selected "vi4T" device.

Type in different names for each of your lights, fans, etc. and click "Submit"

Step-4 Add Smart Device (continued…)
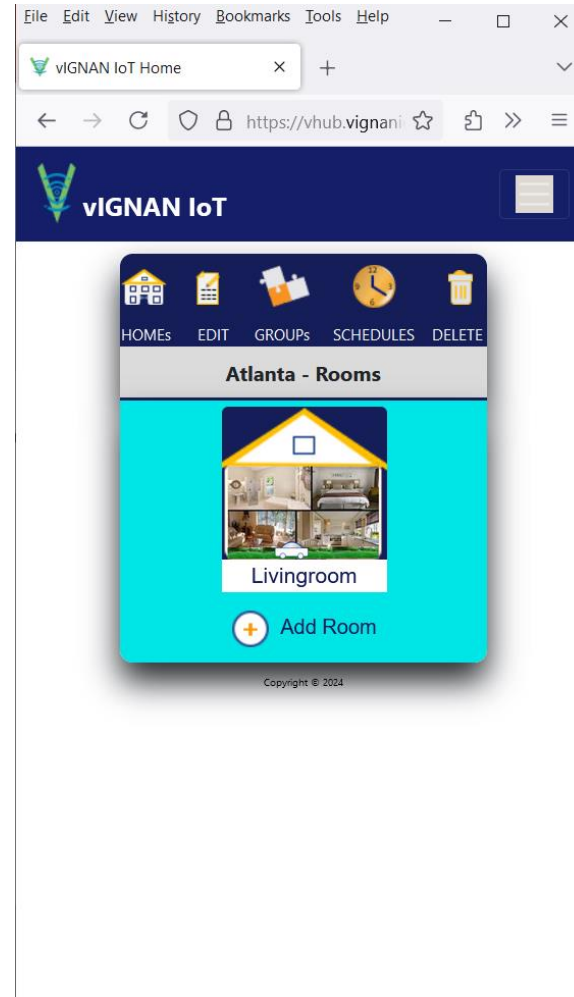

4. On successful addition of a smart device, you will see a message highlighted in green color stating that your next step is to setup the hardware device and configure it.
   **NOTE**: *After successfully adding a smart device, you will receive an email message from* admin@vignaniot.com *with a "Module Key" which is required during hardware device setup.*
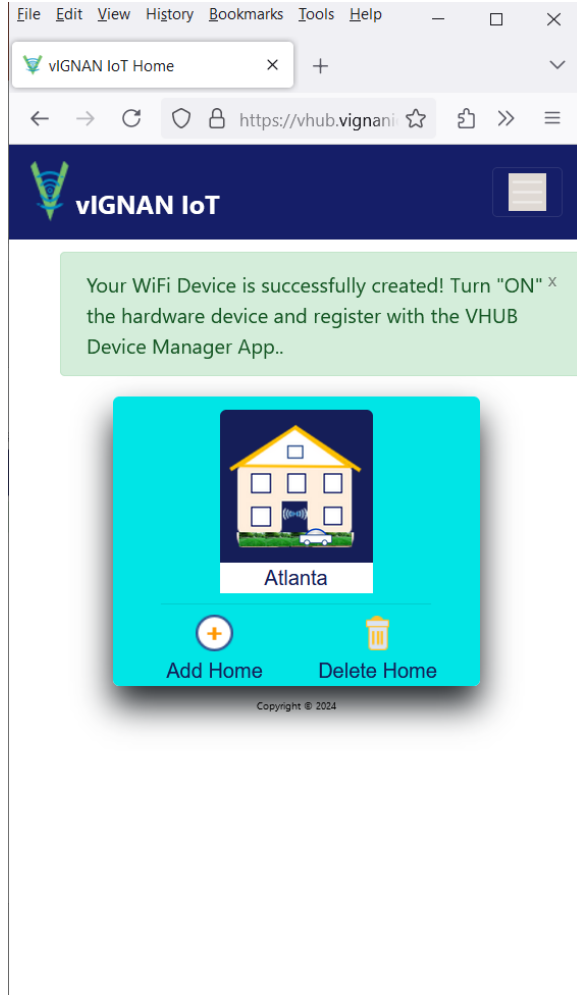

Click on home "Atlanta"

Click on room "Livingroom"

Congratulations!

You successfully created home, room and added smart device.

Final step is to setup smart hardware device
